IMPORTANT REMINDER

The Medicare Advantage Medical Policy manual is not intended to override the member Evidence of Coverage (EOC), which defines the insured’s benefits, nor is it intended to dictate how providers are to practice medicine. Physicians and other health care providers are expected to exercise their medical judgment in providing the most appropriate care for the individual member.

The Medicare Advantage Medical Policies are designed to provide guidance regarding the decision-making process for the coverage or non-coverage of services or procedures in accordance with the member EOC and the Centers of Medicare and Medicaid Services (CMS) policies, when available. In the event of a conflict, applicable CMS policy or EOC language will take precedence over the Medicare Advantage Medical Policy. In the absence of CMS guidance for a requested service or procedure, the health plan may apply their Medical Policy Manual or MCG™ criteria, both of which are developed with an objective, evidence-based process using scientific evidence, current generally accepted standards of medical practice, and authoritative clinical practice guidelines.

Medicare and EOCs exclude from coverage, among other things, services or procedures considered to be investigational, cosmetic, or not medically necessary, and in some cases, providers may bill members for these non-covered services or procedures. Providers are encouraged to inform members in advance when they may be financially responsible for the cost of non-covered or excluded services.

DESCRIPTION

This policy addresses percutaneous and endoscopic removal of disc material as minimally invasive alternatives to open surgical excision for disc decompression. This percutaneous approach involves placement of a probe within the intervertebral disc and aspiration of disc material using a suction cutting device. Endoscopic decompression is performed under visual control and may be intradiscal or may involve the extraction of non-contained and sequestered disc fragments from inside the spinal canal using an interlaminar or transforaminal approach. Endoscopic discectomy may also be referred to as arthroscopic discectomy.

MEDICARE ADVANTAGE POLICY CRITERIA

Note: This policy does not address intradiscal electrothermal annuloplasty (IDET) or percutaneous intradiscal radiofrequency thermocoagulation (PIRFT), which are considered non-covered according to the Medicare NCD for Thermal Intradiscal Procedures (TIPs)
nor does this policy address laser discectomy and radiofrequency disc decompression, which are considered in a separate medical policy (see Cross References below).

| Noridian Healthcare Solutions (Noridian) Local Coverage Determinations (LCDs) and Articles (LCAs) | For the **percutaneous decompression of nucleus pulposus of an intervertebral disc by any method** (CPT code 62287):  
  ✔ Non-Covered Services (L35008) **Scroll to the “Public Version(s)” section at the bottom of the LCD for links to prior versions if necessary.** |
| Medical Policy Manual | Medicare coverage guidance is not available for percutaneous endoscopic discectomy. Therefore, the health plan's medical policy is applicable.  

For an **endoscopic discectomy:**  

✔ Automated Percutaneous and Percutaneous Endoscopic Discectomy, Surgery, **Policy No. 145** (see “NOTE” below) |

**NOTE:** If a procedure or device lacks scientific evidence regarding safety and efficacy because it is investigational or experimental, the service is noncovered as not reasonable and necessary to treat illness or injury. **(Medicare IOM Pub. No. 100-04, Ch. 23, §30 A)**. According to Title XVIII of the Social Security Act, §1862(a)(1)(A), only medically reasonable and necessary services are covered by Medicare. In the absence of a NCD, LCD, or other coverage guideline, CMS guidelines allow a Medicare Advantage Organization (MAO) to make coverage determinations, applying an **objective, evidence-based process, based on authoritative evidence.** **(Medicare IOM Pub. No. 100-16, Ch. 4, §90.5)**. The Medicare Advantage Medical Policy - Medicine Policy No. M-149 - provides further details regarding the plan’s evidence-assessment process (see Cross References).  

**POLICY GUIDELINES**

**REGULATORY STATUS**

The Stryker DeKompressor® Percutaneous Discectomy Probe (Stryker) and the Nucleotome® (Clarus Medical) are examples of percutaneous discectomy devices that received clearance from the U.S. Food and Drug Administration (FDA) through the 510(k) process. Both have the same labeled intended use - "for use in aspiration of disc material during percutaneous disectomies in the lumbar, thoracic and cervical regions of the spine."
A variety of endoscopes and associated surgical instruments have received marketing clearance through the FDA’s 510(k) process.

CODING

NOTE: CPT code 62287 specifically describes a percutaneous aspiration or decompression procedure of the lumbar spine. This code does not distinguish between an aspiration procedure (addressed in this policy) and a laser decompression procedure (addressed in Medicare Advantage Surgery Policy No. M-131). Also note this code is specifically limited to the lumbar region. While the majority of percutaneous discectomies are performed on lumbar vertebrae, the FDA labeling of the Stryker DeKompressor Percutaneous Discectomy Probe includes the thoracic and cervical vertebrae.
